The Netflix Crash

I would like to welcome **Arizona Silver Exploration (AZS TSXV)** back to our newsletter! The company continues to drill its Philadelphia Project (gold/silver) in Arizona.

My favorite chart of the week is **Netflix Inc (NFLX Nasdaq)**. The company's shares climbed all the way to \$700US/share last November and has since crashed to levels not seen since the beginning of 2018! The company's recent subscriber count dropped roughly 200,000. Financials were not up to expectations and they stated subscriber loss, the war, inflation, growing competition, and password sharing contributed.

I guess I should of been a shorter of the stock when I cancelled my Netflix subscription in March. Sometimes real life can spill over into the stock market. What is next?

A lot of traders will have fun trading Netflix in the coming months. Will they catch a falling knife or will we see a big dead cat bounce? Not the arena I like to play in, good luck to all!

Have a great week!

PS: Are any of you following the Twitter / Elon Musk takeover bid?

EVERYTHING YOU NEED TO KNOW ON CARLIN-TYPE GOLD DEPOSITS

Everything you need to know ABOUT CARLIN-TYPE GOLD DEPOSITS

Nevada is one of the world's most productive gold-mining regions, and it's the high-grade Carlin-Type Gold Deposits (CTGDs) that put the Silver State on the gold mining map.

3 KEY FACTS THAT WILL DRIVE THE NEXT ERA OF GOLD DISCOVERY IN NEVADA.

- IMPORTANCE OF CARLIN-TYPE GOLD DEPOSITS (CTGDs):** The vast majority of Nevada's ounces come from one type of deposit: CTGDs. At 2019 levels, Nevada's CTGDs represented 1 of every 5 ounces of gold ore in the world.
- CONCENTRATION OF NEVADA'S CARLIN-TYPE GOLD:** Over 80% of the gold from CTGDs comes from three ranges: the Ely, Toiyabe, and Toiyabe-Nye.
- HOW IS A CARLIN-TYPE GOLD DEPOSIT FORMED?** There are five building blocks to Carlin-Type Gold Deposits: 1. STRUCTURES: THE RIGHT PLUMBING, 2. REMEDIATION: AFTER TREATING THE HOST ROCKS, 3. HOST ROCKS: PLACES FOR GOLD TO BE CONCENTRATED.

NEVADA 2.0 WHERE WILL NEVADA'S NEXT CTGDs BE DISCOVERED?

After Nevada's CTGDs were formed, Nevada's bedrock was broken up into large blocks creating valleys and mountains, known as basins and ranges.

EXPOSED VS. COVERED BEDROCK

There is no reason not to assume that much gold still exists as has been mined in the past, but prospectors, geologists, and geophysicists have found the easy gold.

CORPORATE SPONSOR

The Philadelphia Project 3000 meter Drill Program Underway

- 100% owned/controlled - historic high grade gold producer
- In 2021 Company acquires control over +3 kms strike length
- Drilling provides multiple intercepts of high grade vein
- 33.56 gpt Au, 54.7 gpt Ag over 2.35 metres
- 9.26 gpt Au, 79.8 gpt Ag, 344 gpt Be over 10.76 m.
- 23.47 gpt Au, 97.2 gpt Ag over 2.3 metres
- Drilling discovers wide low grade mineralization in multiple holes
- 1.34 gpt Au, 5.78 gpt Ag over 115 metres
- 1.57 gpt Au, 7.64 gpt Ag over 103.7 metres

Our featured company is a young exploration company focused on exploring gold-silver properties in western Arizona and Nevada. The flagship asset is the Philadelphia property. In addition to the Philadelphia project, the Company recently received a positive Record of Decision on its Notice of Intent to drill an initial twelve exploration holes for Carlin-type targets on its recently acquired Silverton gold-silver property. Drilling there will be scheduled as time and equipment allow.

The Silverton Gold-Silver Project

- Carlin/stockwork gold system
- 100% owned/controlled - 1540 acres
- Past drill results contain 1 to 16 g/t gold

The Ramsey Silver Project

- 100 % owned
- 18 for 18 on drill results on "Ramsey Mine target"
- High-grade historic silver producer - 40oz/ton
- Silver mineralization is open-pittable at depths intersected to date
- All holes have hit thick zone of "disseminated silver"

Sycamore Canyon Gold-Silver Project

- 100 % owned
- 31 grams Gold and 553 grams Silver at surface
- 800 Meters long and 110 meters wide to date
- Maiden drill program planning in process

AMERICAN MANGANESE INC.

A Critical Metal Company Focusing on Recycling Lithium Ion Electric Vehicle Batteries

With planned operation start-up in February 2022, American Manganese's 500 kg/day cathode waste RecycLiCo™ plant is poised to become the first hydrometallurgical demonstration facility in North America for lithium-ion battery recycling and upcycling.

Our featured company is a critical metal company focused on the recycling of lithium-ion batteries using their RecycLiCo™ Patented Process. The process offers a closed-loop and environmentally friendly hydrometallurgical solution for the recycling of cathode materials from spent lithium-ion batteries and battery manufacturing scrap. The Company achieves high recovery and purity of materials such as lithium, cobalt, nickel, manganese, and aluminum from cathode chemistries such as NCA (lithium nickel cobalt aluminum oxide), NMC (lithium nickel manganese cobalt oxide), LCO (lithium cobalt oxide), and LMO (lithium manganese oxide). The RecycLiCo™ patented process aims to produce materials as high-quality cathode precursor, that could be directly integrated into the re-manufacturing of battery cathodes using minimal processing steps.

Patented Technology & Publications

- The Company holds patents in Canada, US, China and South Africa for production of electrolytic manganese metals from low-grade manganese deposits
- Publication in the peer-reviewed Journal of the Electrochemical Society – Experimental Study on Recycling of Spent Lithium-Ion Battery Cathode Materials

Global Opportunity

- Bloomberg New Energy Finance projects that electric vehicles will surpass internal combustion engine vehicle sales before 2040
- Benchmark Minerals Intelligence is tracking 181 Battery Manufacturing Megafactories with over 3,000 GWh of capacity expected in the coming decade
- Proposed phase out of internal combustion vehicles in multiple countries and cities
- New USMCA trade agreement are creating a requirement for advanced batteries to originate from North American for use in future U.S. electric vehicles

Strong Market Fundamentals

- Closed-loop and sustainable lithium-ion battery recycling process
- Low operating cost (estimated reagent consumption cost of \$1/kg of cathode material processed)
- Low energy consumption & no high heat
- No landfill waste or toxic fumes
- High extraction and purity potential of lithium, nickel, cobalt, manganese, and aluminum

Battery Minerals are Critical Minerals

- U.S. Government published a Critical Minerals List, with 35 minerals and metals considered critical to the “national economy and national security” and cobalt, lithium, and manganese are included in the list
- Executive Order signed by the President of the United States, declaring a National Emergency to expand domestic mining industry for critical minerals

Snapshot

Copper: One of the greatest growth profiles and demand / supply metrics

Gold: One of most attractive high-value metals

Chile: Elephant country for major economic copper deposits

People: Highly experienced with execution ability & track record

Projects: Portfolio breadth & depth – along proven mineral belts of Chile

Current focus: 4 projects – with 2 additional projects subject to 3rd-party expenditure via JV

Progress: Rapid progress including 2 drilled projects – further drilling planned for 2022

JV Funding: 2 projects subject to 3rd party expenditures – drilling started in January 2022

INVESTOR SUMMARY

FACT SHEET

NEWS RELEASES

Our featured company owns a highly prospective 62,000-hectare portfolio of eight projects for copper and gold located along proven mineral belts in Chile, one of the world's top mining jurisdictions. The Company has a vision to create value for shareholders and all other stakeholders by making a major copper discovery along the prime mineral belts of Chile, using the best geological and technological methods.

The Projects - Current Priorities

Cerro Buenos Aires (7,600 Ha):

- Located south of Spence / Sierra Gorda district
- Recent drilling through post-mineral cover has vectored towards porphyry target

Redondo-Veronica (6,600 Ha):

- Located north of giant La Escondida district
- Recent drilling gives line of sight to 2 deep porphyry targets

Block 4 (6,800 Ha):

- Located south of giant La Escondida district
- Quartz-vein stockwork – coincident with magnetic high – partial post-mineral cover

Block 3 (10,100 Ha):

- Located south of giant La Escondida district
- Post-mineral cover - adjacent to 2 historically drilled porphyry targets – magnetic anomalies

Arrieros (13,700 Ha):

- Large, post-mineral covered property situated between Chuquicamata and Centinela districts
- Magnetic and IP anomalies

Block 2 (3,300 Ha):

- Structural target – pending exploration advances

Projects subject to 3rd Party Expenditures (Austral Gold Ltd)

Morros Blancos (7,300 Ha):

- HS systems – maar-diatremes – vuggy silica
- Drilling started (January 2022)

Cerro Blanco (6,500 Ha):

- Small lithocap outcrop coincident with magnetic high. Extensive post-mineral cover

Morning Coffee

@CGWM_MrngCoffee

April 22nd, 2022

**FURY/BZ
CAD**

**EDITOR'S
WATCHLIST**

Fury Gold Mines (FURY TSX) closed at .885 on Friday, up .085 since our last newsletter. There was also a spike to .99 in the last two weeks. On April 12th they announced an \$11 Million private placement and closed it a week later. The company's management has no problem raising large amounts of exploration dollars.

"We are thrilled to achieve the support from two highly regarded shareholders," commented Tim Clark, CEO of Fury. "The Company is well-financed, currently drilling, and our management team is very excited about several of our robust exploration targets that we will be testing within the next 12 months."

Check out the Mining Stock Education video with CEO Tim Clark and Chairman Ivan Bebek:

Benz Mining (BZ TSX-V) closed at .64 on Friday. It has been more than a month since the company has released an exploration update. I'm thinking there will be one before our next newsletter.

Over the last month (February 23rd to March 23rd) someone has been accumulating aggressively. RBC's net position is +796,659 shares (\$535,740). When the buying comes in it jumps a bit. Now last Friday, in Australia, the stock traded its 3rd highest volume (429,797) since it listed in December of 2020. Benz is definitely percolating.

SEIZING A BELT-SCALE OPPORTUNITY - INVESTOR PRESENTATION

CEO.CA CAD FORUM

Colonial Coal Largest Shareholder Positions:

[Latest INK Research Report]

David Austin: 19.1 Million

David Emri:

Direct: 13.1 Million
Indirect: 478K
Control: 7.7 Million

Rosseau Asset Management:

26 Million

That is 68 Million in 3 hands, and I know there are several other multi-million share positions. The stock moves pretty quickly on low volume because it is tightly held.

Colonial Coal (CAD TSX-V) bounced off \$1.56 on Friday and closed at \$1.75. That is a .19 bounce of the day's low which I consider to be positive. I'm hoping that becomes the 2022 low and it doesn't continue to fall and test the \$1.00 level. Reading an update from @MiningRocketship on ceo.ca [22 Apr 2022, 12:15] basically says there are several parties at the table and the end of it: "My final question was about whether he could say ANYTHING about timeline as he was positive around Christmas that a deal would happen shortly and now we are 4 months in 2022 and nothing has happened yet. He purely rejected the question and answered why with the precedence from the Western Coal deal where a hostile bid came in on a Wednesday leading to a competitive bid arriving on Friday and over the course of a weekend a buyout was closed from a bid war."

Tradingview

Tradingview is an excellent online charting platform as well as a social network for traders and investors to exchange ideas.

Glossary

Diamond Hands

Slang term for an investor who is ready to hold a position for the end goal, despite the potential risk, headwinds and losses.

Doji Candle

Doji Candles look like a cross because the financial instrument's open and close for the time period are close to equal.

Fibonacci Retracement (Fib)

These are levels in the chart where support and resistance are likely to occur. The levels are 23.6%, 38.2%, 61.8%, and 78.6%. 50% is often added but is not an official level. The levels are calculated from two points chosen by the user, usually an extreme low and an extreme high.

FLEM & DHEM

Fixed Loop Electromagnetic and Down Hole Electromagnetic Surveys

FOMC

The Federal Open Market Committee consists of 12 members and is the U.S. Fed's monetary policymaking body. It is responsible for formulation of a policy designed to promote stable prices and economic growth.

FOMO

Fear Of Missing Out

Naked Shorting

It is the illegal practice of shorting stock that is not borrowed.

Nonfarm Payrolls

Is an official statistic released by the U.S. department of labor, usually on the first Friday of the month. It is a measure of the number of workers in the U.S. excluding farm workers and those employed in private households or non-profit organisations.

Shorting

Borrowing stock, selling it in the market to hopefully buy it back at a lower price, making profit from the difference in price, and then returning the borrowed stock.

Short Squeeze

When a company's stock starts to quickly rise because people shorting the stock are trying to cover their losing positions to prevent further loss.

YOLO

You Only Live Once
